

## MCP629x 10-MHz, Rail-to-Rail Operational Amplifier

### 1 Features

- Gain Bandwidth Product: 10-MHz Typical
- Operating Supply Voltage: 2.4 V to 5.5 V
- Rail-to-Rail Input/Output
- Low Input Bias Current: 1 pA
- Low Quiescent Current: 0.6 mA
- Input Voltage Noise: 8.7 nV/ $\sqrt{\text{Hz}}$  at  $f = 10$  kHz
- Internal RF and EMI Filter
- Extended Temperature Range:  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$
- Unity-Gain Stable
- Easier to Stabilize With Higher Capacitive Load Due to Resistive Open-Loop Output Impedance

### 2 Applications

- Power Modules
- Smoke Detectors
- HVAC: Heating, Ventilating, and Air Conditioning
- Battery-Powered Applications
- Sensor Signal Conditioning
- Photodiode Amplifier
- Analog Filters
- Medical Instrumentation
- Notebooks and PDAs
- Barcode Scanners
- Audio Receiver
- Automotive Infotainment

### 3 Description

The MCP6291 (single), MCP6292 (dual), and MCP6294 (quad) devices comprise a family of general-purpose, low-power operational amplifiers. Features such as rail-to-rail input and output swings, low quiescent current (600- $\mu\text{A}/\text{ch}$  typical) combined with a wide bandwidth of 10 MHz, and low noise (8.7 nV/ $\sqrt{\text{Hz}}$  at 10 kHz) make this family attractive for a variety of applications that require a balance between cost and performance. The low input bias current enables the family to be used in applications with high-source impedances.

The robust design of the MCP629x provides ease-of-use to the circuit designer: a unity-gain stable, integrated RFI and EMI rejection filter, no phase reversal in overdrive condition, and high electrostatic discharge (ESD) protection (4-kV HBM).

The MCP629x family operates over the extended temperature range of  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The family has a power supply range of 2.4 V to 5.5 V.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
MCP6291	SOT-23 (5)	1.60 mm x 2.90 mm
	SC70 (5)	1.25 mm x 2.00 mm
MCP6292	SOIC (8)	3.91 mm x 4.90 mm
	VSSOP (8)	3.00 mm x 3.00 mm
MCP6294	SOIC (14)	8.65 mm x 3.91 mm
	TSSOP (14)	4.40 mm x 5.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

#### Low-Side Motor Control

#### Small-Signal Overshoot vs Load Capacitance

## 4 Revision History

### Changes from Revision B (April 2018) to Revision C Page

• Deleted SOT-23 package preview notation in <i>Device Information</i> table .....	<b>1</b>
• Added SC70 package to <i>Device Information</i> table .....	<b>1</b>
• Added DCK package information to <i>Device Comparison Table</i> .....	<b>3</b>
• Deleted DBV package preview notation from <i>Pin Configuration and Functions</i> section .....	<b>4</b>
• Added DCK package drawing and pin functions to <i>Pin Configuration and Functions</i> section .....	<b>4</b>
• Added DBV (SOT-23) and DCK (SC70) thermal information .....	<b>7</b>

### Changes from Revision A (October 2017) to Revision B Page

• Added DGK package to <i>Thermal Information</i> table .....	<b>8</b>
---	----------

### Changes from Original (July 2017) to Revision A Page

• Deleted MCP6291 SC70, SOT-553, and SOIC packages from <i>Device Information</i> table .....	<b>1</b>
• Deleted MCP6292 WSON and VSSOP (10) packages from <i>Device Information</i> table .....	<b>1</b>
• Changed MCP6294 14-pin SOIC package from preview to production data in <i>Device Information</i> table .....	<b>1</b>
• Deleted DCK, DRL, DSG, RTE and 8-pin D packages from <i>Device Comparison</i> table .....	<b>3</b>
• Deleted DRL (SOT-533) package from MCP6291 pinout image and table in <i>Pin Configuration and Functions</i> section .....	<b>4</b>
• Deleted MCP6291 DCK (SC70) and D (SOIC) package pinout drawings and pin information from <i>Pin Configuration and Functions</i> section .....	<b>4</b>
• Deleted MCP6292 DSG (WSON) and DGS (VSSOP) package pinout drawings and pin table information in <i>Pin Configuration and Functions</i> section .....	<b>5</b>
• Deleted package preview note from MCP6294 pinout drawing in <i>Pin Configuration and Functions</i> section .....	<b>6</b>
• Added MCP6294 <i>Thermal Information</i> table .....	<b>8</b>

## 5 Device Comparison Table

DEVICE	NO. OF CHANNELS	PACKAGE LEADS				
		DBV	DCK	D	DGK	PW
MCP6291	1	5	5	—	—	—
MCP6292	2	—	—	8	8	—
MCP6294	4	—	—	14	—	14

## 6 Pin Configuration and Functions

**Pin Functions: MCP6921**

NAME	PIN		I/O	DESCRIPTION
	NO.			
	SOT-23 (DBV)	SC70 (DCK)		
-IN	4	3	I	Inverting input
+IN	3	1	I	Noninverting input
OUT	1	4	O	Output
V-	2	8	—	Negative (lowest) supply or ground (for single-supply operation)
V+	5	5	—	Positive (highest) supply

OUT D	14	O	Output, channel D
V-	11	—	Negative (lowest) supply or ground (for single-supply operation)
V+	4	—	Positive (highest) supply

## 7 Specifications

### 7.1 Absolute Maximum Ratings

over operating free-air temperature (unless otherwise noted)<sup>(1)</sup>

			MIN	MAX	UNIT
Supply voltage			6		V
Signal input pins	Voltage <sup>(2)</sup>	Common-mode	(V <sub>-</sub> ) – 0.5	(V <sub>+</sub> ) + 0.5	V
		Differential	(V <sub>+</sub> ) – (V <sub>-</sub> ) + 0.2		
	Current <sup>(2)</sup>	–10	10	mA	
Output short-circuit <sup>(3)</sup>			Continuous		mA
Specified, T <sub>A</sub>			–40	125	°C
Junction, T <sub>J</sub>			150		°C
Storage, T <sub>stg</sub>			–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Input pins are diode-clamped to the power-supply rails. Current limit input signals that can swing more than 0.5 V beyond the supply rails to 10 mA or less.
- (3) Short-circuit to ground, one amplifier per package.

### 7.2 ESD Ratings

over operating free-air temperature range (unless otherwise noted)

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±4000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V <sub>S</sub>	Supply voltage		2.4	5.5	V
	Specified temperature		–40	125	°C

### 7.4 Thermal Information: MCP6291

THERMAL METRIC <sup>(1)</sup>		MCP6291		UNIT
		DBV (SOT-23)	DCK (SC70)	
		5 PINS	5 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	221.7	263.3	°C/W
R <sub>θJC(top)</sub>	Junction-to-case(top) thermal resistance	144.7	75.5	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	49.7	51.0	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	26.1	1.0	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	49.0	50.3	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 7.5 Thermal Information: MCP6292

THERMAL METRIC <sup>(1)</sup>	MCP6292		UNIT
	D (SOIC)	DGK (VSSOP)	
	8 PINS	8 PINS	
$R_{\theta JA}$ Junction-to-ambient thermal resistance	157.6	201.2	°C/W
$R_{\theta JC(top)}$ Junction-to-case (top) thermal resistance	104.6	85.7	°C/W
$R_{\theta JB}$ Junction-to-board thermal resistance	99.7	122.9	°C/W
$\Psi_{JT}$ Junction-to-top characterization parameter	55.6	21.2	°C/W
$\Psi_{JB}$ Junction-to-board characterization parameter	99.2	121.4	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 7.6 Thermal Information: MCP6294

THERMAL METRIC	MCP6294		UNIT
	D (SOIC)	PW (TSSOP)	
	14 PINS	14 PINS	
$R_{\theta JA}$ Junction-to-ambient thermal resistance	106.9	135.8	°C/W
$R_{\theta JC(top)}$ Junction-to-case(top) thermal resistance	64	64	°C/W
$R_{\theta JB}$ Junction-to-board thermal resistance	63	79	°C/W
$\Psi_{JT}$ Junction-to-top characterization parameter	25.9	15.7	°C/W
$\Psi_{JB}$ Junction-to-board characterization parameter	62.7	78.4	°C/W

## 7.7 Electrical Characteristics: $V_S$ (Total Supply Voltage) = $(V_+) - (V_-) = 2.4\text{ V to }5.5\text{ V}$

 at  $T_A = 25^\circ\text{C}$ ,  $R_L = 10\text{ k}\Omega$  connected to  $V_S / 2$ ,  $V_{CM} = V_S / 2$ , and  $V_{OUT} = V_S / 2$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>OFFSET VOLTAGE</b>						
$V_{OS}$	Input offset voltage	$V_S = 5\text{ V}$		$\pm 0.3$	$\pm 3$	mV
		$V_S = 5\text{ V}$ , $T_A = -40^\circ\text{C to }125^\circ\text{C}$			$\pm 5$	
$dV_{OS}/dT$	Drift	$V_S = 5\text{ V}$ , $T_A = -40^\circ\text{C to }125^\circ\text{C}$		$\pm 1.1$		$\mu\text{V}/^\circ\text{C}$
PSRR	Power-supply rejection ratio	$V_S = 2.4\text{ V} - 5.5\text{ V}$ , $V_{CM} = (V_-)$		$\pm 7$		$\mu\text{V}/\text{V}$
	Channel separation, DC	At DC		100		dB
<b>INPUT VOLTAGE RANGE</b>						
$V_{CM}$	Common-mode voltage range	$V_S = 2.4\text{ V to }5.5\text{ V}$	$(V_-) - 0.1$		$(V_+) + 0.1$	V
CMRR	Common-mode rejection ratio	$V_S = 5.5\text{ V}$ $(V_-) - 0.1\text{ V} < V_{CM} < (V_+) - 1.4\text{ V}$ $T_A = -40^\circ\text{C to }125^\circ\text{C}$	80	103		dB
		$V_S = 5.5\text{ V}$ $V_{CM} = -0.1\text{ V to }5.6\text{ V}$ $T_A = -40^\circ\text{C to }125^\circ\text{C}$	57	87		
		$V_S = 2.4\text{ V}$ $(V_-) - 0.1\text{ V} < V_{CM} < (V_+) - 1.4\text{ V}$ $T_A = -40^\circ\text{C to }125^\circ\text{C}$		88		
		$V_S = 2.4\text{ V}$ $V_{CM} = -0.1\text{ V to }1.9\text{ V}$ $T_A = -40^\circ\text{C to }125^\circ\text{C}$		81		
<b>INPUT BIAS CURRENT</b>						
$I_B$	Input bias current			$\pm 1$		pA
$I_{OS}$	Input offset current			$\pm 0.05$		pA
<b>NOISE</b>						
$E_n$	Input voltage noise (peak-to-peak)	$V_S = 5\text{ V}$ , $f = 0.1\text{ Hz to }10\text{ Hz}$		4.77		$\mu\text{V}_{PP}$
$e_n$	Input voltage noise density	$V_S = 5\text{ V}$ , $f = 10\text{ kHz}$ , $R_L = 10\text{ k}\Omega$		8.7		$\text{nV}/\sqrt{\text{Hz}}$
		$V_S = 5\text{ V}$ , $f = 1\text{ kHz}$ , $R_L = 10\text{ k}\Omega$		16		
$i_n$	Input current noise density	$f = 1\text{ kHz}$		10		$\text{fA}/\sqrt{\text{Hz}}$
<b>INPUT CAPACITANCE</b>						
$C_{ID}$	Differential			2		pF
$C_{IC}$	Common-mode			4		pF
<b>OPEN-LOOP GAIN</b>						
$A_{OL}$	Open-loop voltage gain	$V_S = 2.4\text{ V}$ $(V_-) + 0.04\text{ V} < V_O < (V_+) - 0.04\text{ V}$ $R_L = 10\text{ k}\Omega$		100		dB
		$V_S = 5.5\text{ V}$ $(V_-) + 0.05\text{ V} < V_O < (V_+) - 0.05\text{ V}$ $R_L = 10\text{ k}\Omega$	104	130		
		$V_S = 2.4\text{ V}$ $(V_-) + 0.06\text{ V} < V_O < (V_+) - 0.06\text{ V}$ $R_L = 2\text{ k}\Omega$		100		
		$V_S = 5.5\text{ V}$ $(V_-) + 0.15\text{ V} < V_O < (V_+) - 0.15\text{ V}$ $R_L = 2\text{ k}\Omega$		130		
<b>FREQUENCY RESPONSE</b>						
GBP	Gain bandwidth product	$V_S = 5\text{ V}$ , $G = 1$		10		MHz
$\phi_m$	Phase margin	$V_S = 5\text{ V}$ , $G = 1$		55		$^\circ$
SR	Slew rate	$V_S = 5\text{ V}$ , $G = 1$		6.5		V/ $\mu\text{s}$
$t_s$	Settling time	To 0.1%, $V_S = 5\text{ V}$ , 2-V step, $G = 1$ $C_L = 100\text{ pF}$		0.5		$\mu\text{s}$
		To 0.01%, $V_S = 5\text{ V}$ , 2-V step, $G = 1$ $C_L = 100\text{ pF}$		1		
$t_{OR}$	Overload recovery time	$V_S = 5\text{ V}$ $V_{IN} \times \text{gain} > V_S$		0.2		$\mu\text{s}$

**Electrical Characteristics:  $V_S$  (Total Supply Voltage) =  $(V_+) - (V_-) = 2.4\text{ V to }5.5\text{ V}$  (continued)**

 at  $T_A = 25^\circ\text{C}$ ,  $R_L = 10\text{ k}\Omega$  connected to  $V_S / 2$ ,  $V_{CM} = V_S / 2$ , and  $V_{OUT} = V_S / 2$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT

## 8 Detailed Description

### 8.1 Overview

The MCP629x series is a family of low-power, rail-to-rail input and output op amps. These devices operate from 2.4 V to 5.5 V, are unity-gain stable, and are designed for a wide range of general-purpose applications. The input common-mode voltage range includes both rails and allows the MCP629x series to be used in any single-supply application. Rail-to-rail input and output swing significantly increases dynamic range in low-supply applications and are designed for driving sampling analog-to-digital converters (ADCs).

### 8.2 Functional Block Diagram

## 8.3 Feature Description

### 8.3.1 Rail-to-Rail Input

The input common-mode voltage range of the MCP629x family extends 100 mV beyond the supply rails for the full supply voltage range of 2.4 V to 5.5 V. This performance is achieved with a complementary input stage: an N-channel input differential pair in parallel with a P-channel differential pair, as the [Functional Block Diagram](#) shows. The N-channel pair is active for input voltages close to the positive rail, typically  $(V+) - 1.4$  V to 100 mV above the positive supply, whereas the P-channel pair is active for inputs from 100 mV below the negative supply to approximately  $(V+) - 1.4$  V. There is a small transition region, typically  $(V+) - 1.2$  V to  $(V+) - 1$  V, in which both pairs are on. This 200-mV transition region can vary up to 200 mV with process variation. Thus, the transition region (with both stages on) can range from  $(V+) - 1.4$  V to  $(V+) - 1.2$  V on the low end, and up to  $(V+) - 1$  V to  $(V+) - 0.8$  V on the high end. Within this transition region, PSRR, CMRR, offset voltage, offset drift, and THD can degrade compared to device operation outside this region.

### 8.3.2 Rail-to-Rail Output

Designed as a low-power, low-voltage operational amplifier, the MCP629x series delivers a robust output drive capability. A class AB output stage with common-source transistors achieves full rail-to-rail output swing capability. For resistive loads of 10 k $\Omega$ , the output swings to within 15 mV of either supply rail, regardless of the applied power-supply voltage. Different load conditions change the ability of the amplifier to swing close to the rails.

### 8.3.3 Overload Recovery

Overload recovery is defined as the time required for the operational amplifier output to recover from a saturated state to a linear state. The output devices of the operational amplifier enter a saturation region when the output voltage exceeds the rated operating voltage, because of the high input voltage or the high gain. After the device enters the saturation region, the charge carriers in the output devices require time to return to the linear state. After the charge carriers return to the linear state, the device begins to slew at the specified slew rate. Therefore, the propagation delay (in case of an overload condition) is the sum of the overload recovery time and the slew time. The overload recovery time for the MCP629x series is approximately 200 ns.

## 8.4 Device Functional Modes

The MCP629x family has a single functional mode. These devices are powered on as long as the power-supply voltage is between 2.4 V ( $\pm 1.2$  V) and 5.5 V ( $\pm 2.75$  V).

## 9 Application and Implementation

### NOTE

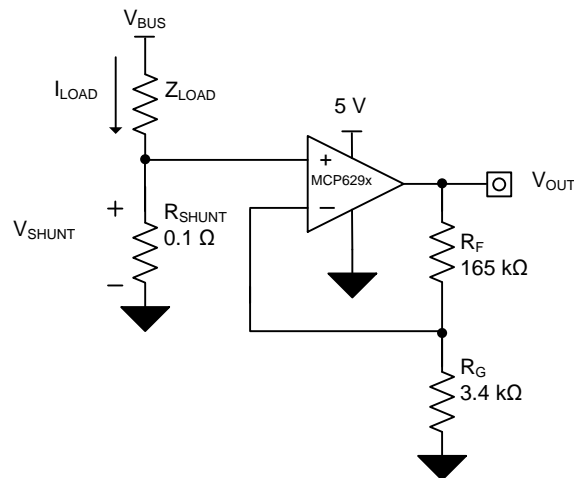

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The MCP629x series features 10-MHz bandwidth and 6.5-V/ $\mu$ s slew rate with only 600 $\mu$ A of supply current per channel, providing good AC performance at low power consumption. DC applications are well served with a low input noise voltage of 8.7 nV /  $\sqrt{\text{Hz}}$  at 10 kHz, low input bias current, and a typical input offset voltage of 0.3 mV.

### 9.2 Typical Application

Figure 33 shows the MCP629x configured in a low-side, motor-control application.

**Figure 33. MCP629x in a Low-Side, Motor-Control Application**

#### 9.2.1 Design Requirements

The design requirements for this design are:

- Load current: 0 A to 1 A
- Output voltage: 4.95 V
- Maximum shunt voltage: 100 mV

## Typical Application (continued)

### 9.2.2 Detailed Design Procedure

The transfer function of the circuit in [Figure 33](#) is shown in [Equation 1](#).

$$V_{OUT} = I_{LOAD} \times R_{SHUNT} \times \text{Gain} \quad (1)$$

The load current ( $I_{LOAD}$ ) produces a voltage drop across the shunt resistor ( $R_{SHUNT}$ ). The load current is set from 0 A to 1 A. To keep the shunt voltage below 100 mV at maximum load current, the largest shunt resistor is defined using [Equation 2](#).

$$R_{SHUNT} = \frac{V_{SHUNT\_MAX}}{I_{LOAD\_MAX}} = \frac{100\text{mV}}{1\text{A}} = 100\text{m}\Omega \quad (2)$$

Using [Equation 2](#),  $R_{SHUNT}$  is 100 m $\Omega$ . The voltage drop produced by  $I_{LOAD}$  and  $R_{SHUNT}$  is amplified by the MCP629x to produce an output voltage of roughly 0 V to 4.95 V. The gain needed by the MCP629x to produce the necessary output voltage is calculated using [Equation 3](#):

$$\text{Gain} = \frac{(V_{OUT\_MAX} - V_{OUT\_MIN})}{(V_{IN\_MAX} - V_{IN\_MIN})} \quad (3)$$

Using [Equation 3](#), the required gain is calculated to be 49.5 V/V, which is set with resistors  $R_F$  and  $R_G$ . [Equation 4](#) is used to size the resistors,  $R_F$  and  $R_G$ , to set the gain of the MCP629x to 49.5 V/V.

$$\text{Gain} = 1 + \frac{(R_F)}{(R_G)} \quad (4)$$

Choosing  $R_F$  as 165 k $\Omega$  and  $R_G$  as 3.4 k $\Omega$  provides a combination that equals roughly 49.5 V/V. [Figure 34](#) shows the measured transfer function of the circuit shown in [Figure 33](#).

### 9.2.3 Application Curve

**Figure 34. Low-Side, Current-Sense Transfer Function**

## 10 Power Supply Recommendations

The MCP629x series is specified for operation from 2.4 V to 5.5 V ( $\pm 1.2$  V to  $\pm 2.75$  V); many specifications apply from  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The [Typical Characteristics](#) section presents parameters that can exhibit significant variance with regard to operating voltage or temperature.

### CAUTION

Supply voltages larger than 6 V can permanently damage the device; see the [Absolute Maximum Ratings](#) table.

Place 0.1- $\mu\text{F}$  bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high-impedance power supplies. For more detailed information on bypass capacitor placement, see the [Layout Example](#) section.

### 10.1 Input and ESD Protection

The MCP629x series incorporates internal ESD protection circuits on all pins. For input and output pins, this protection primarily consists of current-steering diodes connected between the input and power-supply pins. These ESD protection diodes provide in-circuit, input overdrive protection, as long as the current is limited to 10-mA, as stated in the [Absolute Maximum Ratings](#) table. [Figure 35](#) shows how a series input resistor is added to the driven input to limit the input current. The added resistor contributes thermal noise at the amplifier input and the value must be kept to a minimum in noise-sensitive applications.

**Figure 35. Input Current Protection**

## 11 Layout

### 11.1 Layout Guidelines

For best operational performance of the device, use good printed-circuit board (PCB) layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole and of op amp itself. Bypass capacitors reduce the coupled noise by providing low-impedance power sources local to the analog circuitry.
  - Connect low-ESR, 0.1- $\mu$ F ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single-supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces electromagnetic interference (EMI) noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current. For more detailed information, see [Circuit Board Layout Techniques](#).
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If these traces cannot be kept separate, crossing the sensitive trace perpendicular is much better as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. As shown in [Figure 37](#), keeping RF and RG close to the inverting input minimizes parasitic capacitance on the inverting input.
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.
- Cleaning the PCB following board assembly is recommended for best performance.
- Any precision integrated circuit can experience performance shifts resulting from moisture ingress into the plastic package. Following any aqueous PCB cleaning process, baking the PCB assembly is recommended to remove moisture introduced into the device packaging during the cleaning process. A low-temperature, post-cleaning bake at 85°C for 30 minutes is sufficient for most circumstances.

### 12.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 12.4 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 12.5 Trademarks

E2E is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

### 12.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 12.7 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=100ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
